

Cookie Policy

This site sets exactly two cookies, both strictly necessary for the site to function, both first-party, neither capable of tracking you. That's the policy; here are the specifics.

The complete list

Cookie	What it does	Lifetime	Type
soundchex_session	Identifies your browsing session so forms (the SCNet waitlist) can work. Contains a random identifier, nothing about you.	2 hours, then expires	Strictly necessary, first-party
XSRF-TOKEN	Protects forms against cross-site request forgery — it proves a submission came from this site and not a malicious one.	2 hours, then expires	Strictly necessary, first-party

What we deliberately don't have

- **No analytics cookies** — we run no analytics at all.
- **No advertising or targeting cookies** — no ads, no ad networks, no retargeting.
- **No third-party cookies** — no external service is embedded in these pages, so none can set one.
- **No fingerprinting or "cookieless tracking"** — removing cookies and tracking you anyway would violate the spirit of this page; we don't.

Why there's no cookie banner

Consent banners exist for cookies that are not necessary — analytics, advertising, preferences shared with third parties. Strictly necessary cookies don't require consent under GDPR/ePrivacy, and they're the only kind we set. A banner here would be theater.

Controlling them

You can block or delete cookies in your browser at any time. Blocking these two breaks nothing except submitting the waitlist form; every page still reads fine.

The apps and the server

The SoundChex apps talk to *your* server, and any session state they hold is between your devices and your machine — nothing about it reaches us. Details in the [Server Privacy](#) and per-app privacy documents.
